

The 2011 ShipPax Award for
Total HI-FOG fire protection and restaurant concept:

PIANA

The PIANA impressed the ShipPax Award jury in two ways. She is the world's first ro-pax ferry equipped entirely with a high-pressure water mist Marioff HI-FOG system. HI-FOG has traditionally been used in accommodation and service areas. But, in this case, it has also been installed on the vehicle decks and in the engine room, replacing conventional drencher and CO2 fire fighting systems. The jury was also pleasantly surprised by the ship's swish accommodation and the modular multifunctional restaurant which, on busy sailings, serves as an extension to the à la carte, the self-service, or both restaurants.

We award trendsetters in the passenger shipping industry,
for the benefit of demanding sea travellers.
